Java Doc Comments

- Javadoc comments only have meaning when they appear before a public class, or before public or protected variables and methods.
- The first line in a Javadoc comment is a summary line. You'll see this description at the top of the HTML file for the class.

```java
/**
 * Porsche.java - a simple class for demonstrating the use of javadoc
 * @author  Alvin Alexander
 * @version 1.0
 * @see Automobile
 */
public class Porsche extends Automobile {

    protected String color;

    /**
     * Retrieve the value of color.
     * @return A String data type.
     */
    public String getColor() {
        return color;
    }

    /**
     * Set the value of color.
     * @param newColor A variable of type String.
     */
    public void setColor(String newColor) {
        color = newColor;
    }
}
```
